Education

Rose-Hulman Institute of Technology

Bachelor of Science in Computer Science | GPA: 3.60

Expected May 2023

Coursework: Computer Architecture, Object-Oriented Software Development, Data Structure and Algorithms, Database Systems, Web Programming, Operating Systems, Computer Networks

Skills

Languages: Python, C, Java, JavaScript, HTML, CSS, MIPS Assembly

Framework/Libraries: React JS, React Native, Bootstrap, Redux, Node JS, Django, Firebase

Databases: Relational, Non-relational model, SQL

Artificial Intelligence: Machine Learning, Reinforcement Learning, Neural Networks, TensorFlow

Experiences

Rose-Hulman Ventures

Software Intern

October 2020 – May 2021

- Developed a React Native mobile application that allows motor engineers to configure and debug a motor controller by communicating to it via Bluetooth.
- Designed and implemented the application's Bluetooth communication infrastructure with the Bluetooth low energy library to stabilize reading and writing messages and ensure real-time updates.
- Reduced communication latency by 70% and robustly verified read and write operations to avoid data corruption.

TechPoint S.O.S. Challenge

Participant

June 2020 - July 2020

- Collaborated on a multi-disciplinary team to work on a solution in 5 weeks that tackled the challenges faced by the tourism industry due to the COVID-19 pandemic.
- Developed a web application using React JS, Spring Boot, and PostgreSQL that calculates the new maximum capacity for convention rooms according to CDC social distancing guidelines.
- Tracked the current capacity of these rooms with respect to their maximum capacity.

Projects

Surprise Discovery

- A web app for Rose-Hulman students to buy and sell secondhand items with each other.
- Designed and implemented the SQL database with store procedures for storing and retrieving data.
- Used Node JS to create an API that connected the web page to the database.

Exam Review System

- A web app where Rose-Hulman students can host join review sessions to study with each other. Students can also manage their profile of ongoing and taken courses.
- Utilized Firebase as backend and granted access only to Rose-Hulman Students and faculties.

Soccer Stats

- Developed a Django application that enables soccer fans to view statistics across premier league seasons.
- Consumed the football API to retrieve data. Stored past season's static data into the SQLite database to avoid unnecessary API calls and exceeding the API quota.

Traffic Sign AI

- Designed and trained a convolutional neural network with TensorFlow to identify which traffic sign appears in a photograph.
- Trained the model with 1,000 images of 43 different road signs and achieved about 97% accuracy.
